

Manish Kumar

Backend Engineer - Python | Django | FinTech and ERP Automation

Email: manishprajapat01997@gmail.com | Phone: +91 90576 40667 | Location: Ahmedabad, Gujarat, India

PROFESSIONAL SUMMARY

Backend Engineer with 3+ years of experience architecting automation-driven backend systems using Python, Django, and PostgreSQL. Specialized in building ETL pipelines, ERP integrations (Tally), and FinTech API workflows for secure financial data processing. Currently leading the backend of Intelligere, an accounts automation platform at Digital Documentation Systems Pvt. Ltd., driving up to 85% operational efficiency improvement through automation and data-centric design. Strong expertise in asynchronous task processing with Celery and Redis, real-time systems using WebSockets, and REST API design. Building working knowledge of SQL, PySpark, Azure Data Factory, Azure Functions, and Power BI for data engineering and analytics use cases. Passionate about clean architecture, scalability, and production-ready backend engineering.

WORK EXPERIENCE

Software Engineer - Digital Documentation Systems Pvt. Ltd., Ahmedabad

August 2023 - Present

- Build Django applications with Django REST Framework (DRF) for JSON APIs, combining HTML, CSS, and JavaScript within the Django environment.
- Use PostgreSQL and SQLite for data storage. Integrate WebSockets and Celery with Redis for real-time communication and asynchronous task processing.
- Built Python and XML integrations with Tally ERP, generating XML to push purchase, sales, bank, journal, and CNDN voucher entries into Tally, and syncing existing ledger and voucher data back from Tally.
- Used Kivy and PyInstaller to package a desktop installer for easy client-side installation.

Project: Intelligere - Accounts Automation Engine (Led backend development end-to-end)

Technologies: Python, Django, DRF, PostgreSQL, Pandas, Celery, Redis, WebSockets, XML, Tally ERP. Website: digitaldocsys.in

- Own and lead the backend of Intelligere end-to-end, including architecture, API design, database design, and integration logic, for an ERP-agnostic accounts automation platform trusted by 6,000+ MSMEs and CA firms across India.
- Built automated ETL pipelines to process financial data from PDF and CSV files, enabling voucher creation, ledger posting, and inventory updates.
- Delivered modules for Bank Statement, Invoice Create, GST Compare, Sales Entries, B2B Entries, CNDN Entries, Invoice Import, Amount Distribution, Ledger Export, DocuVault, Payables and Receivables, Biz Dox, MIS Reports, and Inventory Management.
- Built the Journal Entries module and a Procurement Automation (Reverse Auction) module, where a buyer's requirement is broadcast to multiple vendors who compete via live bidding to win the order.
- Implemented structured logging for Tally voucher entries (success, errors, exceptions) for full audit traceability, improving operational efficiency for finance teams and Chartered Accountants by approximately 85%.

Project: Task Management System (Internal CRM and Workflow Platform)

Technologies: Django, PostgreSQL, HTML, CSS, JavaScript, WebSockets

- Independently designed and developed an internal task and customer follow-up management system from scratch.
- Implemented multi-level role-based access control (RBAC) for Admin, Managers, Distributors, Sales Teams, and End Users.
- Built workflow processes with task transitions, follow-up tracking, and real-time notifications using WebSockets.
- Developed dynamic reports for customer-wise, date-wise, and user-wise performance tracking. Deployed and used internally to improve task visibility and coordination.

Project: FinTech Banking Integration (Plaid Transaction Platform)

Technologies: Python, Django, Plaid API (Sandbox), Pandas, PostgreSQL

- Developed a FinTech backend application simulating real-world banking workflows using Plaid Sandbox.
- Implemented secure bank account linking via Plaid Link, including public-token to access-token lifecycle management.
- Built transaction ingestion using the Plaid Transactions API and normalized data with Pandas-based ETL.
- Persisted structured transaction data using Django ORM. Designed following production-style FinTech API patterns, extendable to Plaid Production.

TECHNICAL SKILLS

Programming and Backend: Python (3.x), OOPs, Django, Django REST Framework (DRF), RESTful API Development

FinTech and Data Processing: Plaid API (Sandbox), ETL Pipelines (Pandas, NumPy)

Data Engineering (working knowledge): SQL, PySpark, Azure Data Factory, Azure Functions

Business Intelligence (working knowledge): Power BI - dashboards, DAX, data modeling

Asynchronous and Real-Time Systems: Celery, Redis, WebSockets (real-time notifications)

Databases: PostgreSQL, MySQL, SQLite

ERP Integration: Tally ERP (XML-based voucher posting and data sync)

Frontend and UI: HTML5, CSS3, JavaScript, Django Templates

Tools and DevOps: Git, GitHub, Postman, Docker

Desktop and Automation: Kivy, PyInstaller

EDUCATION

Bachelor of Technology (B.Tech), 2018

Sobhasaria Engineering College, Sikar, Rajasthan - Rajasthan Technical University - 68.7%

Higher Secondary Certificate (H.S.C), 2014

Tagore Senior Secondary School, Kuchaman City, Rajasthan - Rajasthan Board - 69.0%

Secondary School Certificate (S.S.C), 2012

Tagore Senior Secondary School, Kuchaman City, Rajasthan - Rajasthan Board - 67.5%
